

# Tru-Secure® peripheral catheter securement device

## Easily secure peripheral catheters

### Tru-Secure® peripheral catheter securement

The Tru-Secure peripheral catheter securement device makes securing a peripheral IV catheter easy. The single sterile pouched securement device can take the place of Tegaderm and tape, reducing the amount of supplies needed to secure the catheter. The Tru-Secure device features a transparent covering to protect the insertion site while allowing for visualization of the access site and surrounding skin. The hypo-allergenic adhesive provides effective securement, yet does not require alcohol for removal. The Tru-Secure device is easy to apply and easy to remove, making it less traumatic to the skin surface.

- Provides for stabilization of peripheral catheters
- Can replace tape and Tegaderm
- Protects insertion site with transparent dressing
- Adhesive foam safely secures and is easy to remove
